360 Degree Virtual Tour

Aerial Filming and Cinematography

To garner authentic floating digital imagery of any property and presenting it as matchless a talented and experienced skill is required and that is our USP. We specialize in both oblique and original scaled vertical photography. We deliver deft aerial cinematography using first-rate Unmanned Aerial Systems (UAS), serving all our clients with spectacular aerial imagery. We have a fusion of creativity and technical proficiency, with the help of which we can roll out the cutting edge in aerial technology and cinematography to offer solutions for your project requirements.

Geographic Mapping & Surveying

Envent provides its clients with an array of services under the belt of Mapping & Surveying. Some of the services rendered are volumetric & area surveys, alignment surveys, flood, drought and encroachment studies. In addition to this, traffic surveys, as well as 3D mapping with drones are some of the services that we undertake.

Construction Sites Filming

Our aerial filming technology is the aptest way a construction company can keep track of the development of their property, administer workforce and resources, supervise the budget and time. This helps you to view your property from the initial stages of the development until the completion of the project. As a result, we can help you in capturing the entire lifecycle of your project.

Hotels and Resorts Filming

Adroit photographic skills help us to provide you with the best shots for your hotels and resort businesses. Our aerial filming team is inclined towards providing you with an aerial viewpoint that will help your business stand out from the competition.

Real Estate Filming

Drones, these days, are playing an important role in the growth of the real estate sector in India. The ability of a drone to capture stunning landscapes in high definition has made millions of professionals in the real estate sector realise that it is better than its land-based counterpart. The impressive aerial footage captured with the help of drones invariably succeeds in tempting the potential buyers towards the piece of land that has been put on sale. Get in touch with Envent if you are finding it hard to come across buyers for your property.

Live Events

Drones, these days, are used to give life to the live events across the globe by capturing their uninterrupted footage. High Definition footage captured drone-mounted cameras vividly accentuate all the brilliant bits of the events. What makes the use of such cameras irresistible is the fact that everything gets noticed and the loss of any detail proudly stands at zero.

360 Degree Virtual Tour

We have a team of experts who provide you with excellent value for money Virtual Tours which you could integrate into your website easily without any extra costs. It will help you promote your business in an exclusive and ocular way. Besides our professionals that we have, also the technology that we use is foremost, be it the camera that we use which has a feature to capture the entire 360-degree view without taking any shots of the camera itself. Without visiting a particular location, a person can see the place on his/her mobile device and get a clear-cut idea of the property.

360°

DGCA Guidelines

The operation of drones in India is regulated by the guidelines laid down by the Directorate General of Civil Aviation (DGCA). A few of them are:

- 1: A drone flying in India should stay in the Visual Line of Sight.
- 2: Drones are not allowed to fly in controlled airspace.
- 3: Any operator who wishes to fly a drone at or above 200 feet above ground level in uncontrolled airspace needs to have an Unmanned Aircraft Operator Permit issued by DGCA.
- 4: All the drones flying in Indian skies must have a Unique Identification Number awarded by DGCA.

Please feel free to visit www.dgca.nic.in if you seek elucidation in this regard.

Safety Features of Drone

- Safe and comfortable flying operations, option to add an altitude window, closed loop waypoint check, multiple battery checks, GPS checks.
- Emergency failsafe recovery, predictive battery failsafe, RC signal test, flight sensor health analysis, flight data logging.
- Redundant flight control systems (OPTION), showing limits of the flight envelope.
- Geofencing for safety, auto-pilot home location check, terrain collision avoidance, endurance test.

Our Pricing

Envent prices its services depending on numerous elements. The pricing will differ due to reasons such as

- a) Type of equipment (drones, cameras, gimbals, etc.) to be used.
- b) Magnitude of the landscape to be captured.
- c) Distance of the site
- d) Specificity in the shots required
- e) Requirement of particular areas or regions
- f) Deadline date for the final video
- g) Intricacies in the shoot
- h) Number of days for the shoot
- i) Nature of editing and optimisation to be carried out at the post-production stage.
- j) The time required for the editing of the video (Which depends on the Length of the video).
- K) The purpose of the video like for external advertising, internal promotion, training or company overview (The videos will be accordingly planned)
